Angle Seat Valve 7010

Build up and function

Spring closes

The function „spring closes“ may be applied closing against or closing with the flow. In the configuration closing with the flow the valve should only be used for gaseous fluids. If used for liquids, water hammers may occur.

Removable position indicator

Bonnet can be rotated as required (compressed air connection)

Direct pressure control (with a pilot valve if required) actuation by air, water, mineral oil and other media

Head Section

Piston rod stainless steel

Spring opens

Bonnet material chrome plated brass, plastic, stainless steel or Aluminium

Exterior lip seal

Leak detector

PTFE packing, special version free or (packing underneath)

Seating seal in PTFE or other materials
