

# Digital Positioner 8049-IPC

## with integrated process controller

**Compact digital positioner for pneumatic valves with integrated process controller.**

- Combination of positioner and process controller
- Compact solution for local control tasks
- Suitable for fast controlled systems
- Cycle time selectable between 25ms, 50ms, 100ms, 200ms and 500ms
- Internal or External setpoint specification
- Clearly legible display
- Sensor signal: Current interface and Pt100
- Can be configured as P-, PI-, PD- and PID-controller
- Integrated stroke feedback without exposed parts
- Big stroke range 3 - 28 / 3 - 50 mm
- Self learning adaption to valve actuator
- Configuration and diagnostic functions via PC software or directly on the display
- Not vulnerable to vibrations
- Protection class IP 65
- Also available for part turn actuators (single or double acting)

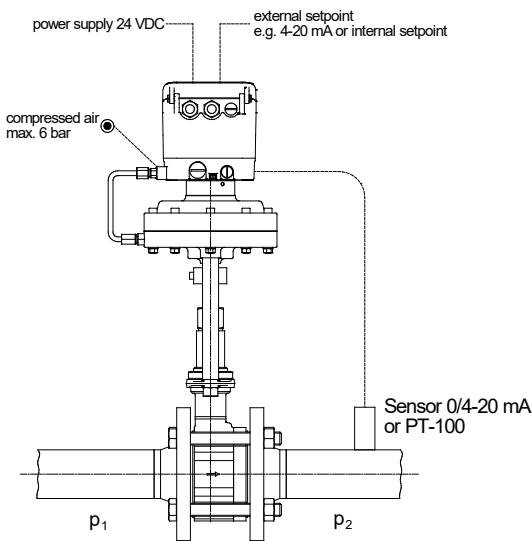

### Technical Information

## Functional description

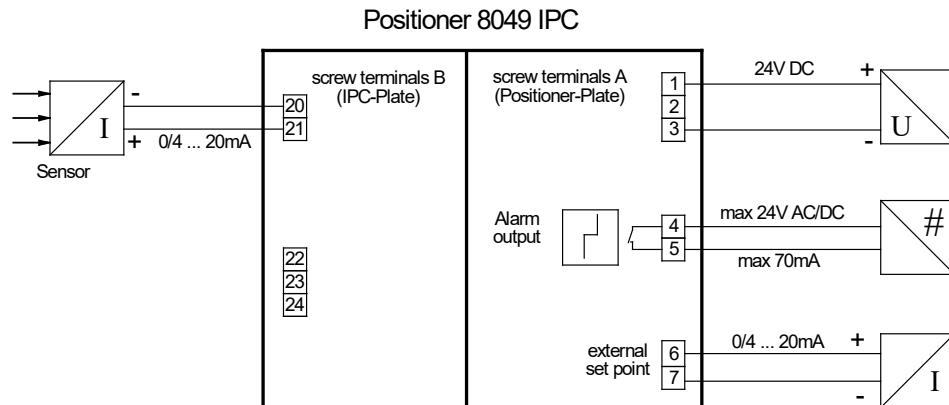

The 8049-IPC with integrated process controller offers a solution for demanding control tasks without higher-level process control systems. The basis of the 8049-IPC is the proven positioner 8049 in the 4-wire version. One additional IPC-module in the cover plate of the basic unit forms the complete unit of the 8049-IPC. The connection of a process sensor as reference variable, optionally as 0/4-20 mA sensor or PT-100 element, is made directly at the 8049-IPC. The setpoint can be specified either externally or directly on the controller display. Scaling of the 8049-IPC as a P, PI, PD or PID controller offers the optimum solution for every process, especially in combination with valve technology from Schubert & Salzer. The process-related control parameters can be set either directly on the 8049-IPC or via the software DeviceConfig. Based on the control parameters, the IPC module calculates the difference between the reverence variable and the setpoint. In parallel, the process controller supplies the positioner within a variable cycle time with the control signal required for positioning. Thus, each control difference results in a change of the valve stroke.

## Connection example Pt-100

## Dimensions

For linear actuators

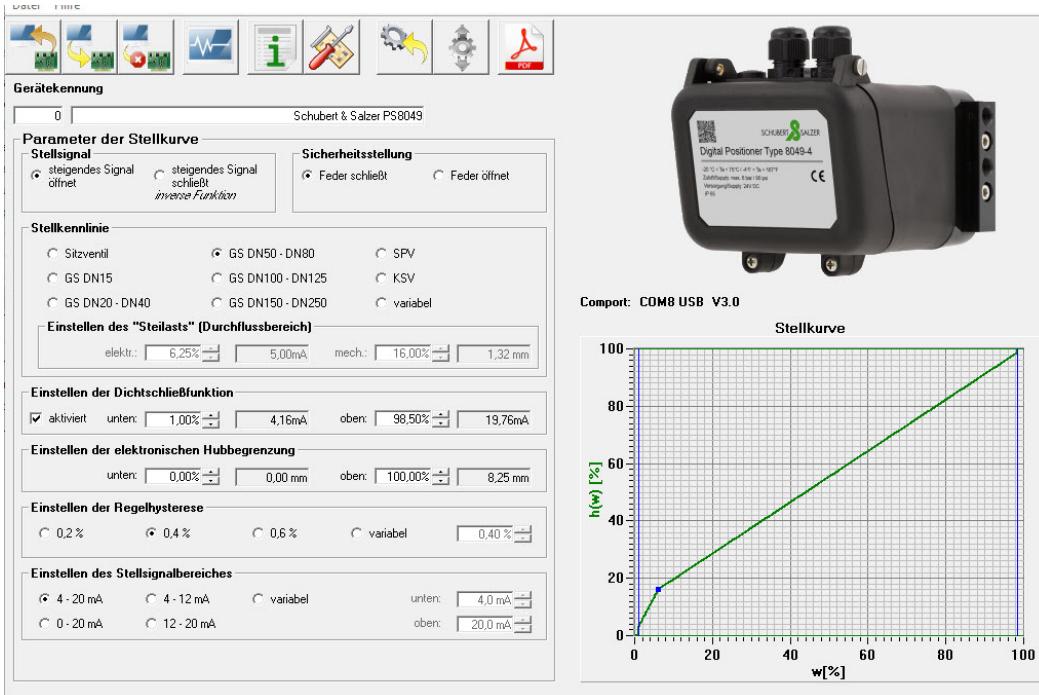

For quarter-turn actuators

## Configuration-Software „DeviceConfig“

### Setup-Parameters

Adjustment of control parameters (input signal, stroke limitation, closing function, control hysteresis, valve function, etc.)

The screenshot shows the "Parameter der Stellkurve" (Travel Curve Parameters) section of the software. It includes:

- Stellsignal:** Options for "steigendes Signal öffnet" (increasing signal opens) and "steigendes Signal schließt" (increasing signal closes).
- Sicherheitsstellung:** Options for "Feder schließt" (Spring closes) and "Feder öffnet" (Spring opens).
- Stellkurvenlinie:** Selections for "Sitzventil" (Seat valve), "GS DN50 - DN80", "SPV", "GS DN15", "GS DN100 - DN125", "KSV", "GS DN20 - DN40", "GS DN150 - DN250", and "variabel".
- Einstellen des "Steilasts" (Durchflussbereich):** Setpoints for "elektr." (6.25% to 5.00mA) and "mech." (16.00% to 1.32 mm).
- Einstellen der Dichtschließfunktion:** Activated (checked), setpoints for "unten" (1.00% to 4.16mA) and "oben" (98.50% to 19.76mA).
- Einstellen der elektronischen Hubbegrenzung:** Setpoints for "unten" (0.00% to 0.00 mm) and "oben" (100.00% to 8.25 mm).
- Einstellen der Regelhysterese:** Options for "0.2%", "0.4%", "0.6%", and "variabel" (0.40%).
- Einstellen des Stellsignalbereiches:** Options for "4 - 20 mA", "4 - 12 mA", "variabel", "unten" (4.0 mA), and "oben" (20.0 mA).

To the right, there is a graph titled "Stellkurve" (Travel Curve) showing the relationship between position  $w[\%]$  on the x-axis (0 to 100) and travel  $h(w)[\%]$  on the y-axis (0 to 100). The curve starts at approximately (0, 10) and ends at (100, 100), with a vertical segment at the end.

### Live-Monitor

The operating conditions of the positioner, can be viewed with the live monitor.

The live monitor interface includes the following sections:

- Simulation:** Displays three analog bars for "Set point value" (55.38%), "Actual value" (55.49%), and "Deviation" (0.11).
- Error:** Status indicators for "Voltage", "Control error", and "Setpoint signal error".
- Status:** Status indicators for "Drag pulses" and "Not Adapted".
- Active setpoint source:** Options for "Analogue setpoint signal", "Digital setpoint signal", "Manual mode", "Setpoint signal error", "Binary input active", and "Binary input open".
- Inputs/Outputs:** Shows "p IN: 0", "p OUT: 0", "Temperature: 22.5 °C", and "Setpoint signal: 0.00 mA".
- Status- \ Error flags:** A list of error flags with corresponding icons:
  - Valve travel
  - Setpoint signal error
  - EEPROM
  - Control error
  - Seal error
  - Valve error
  - Mintemp too low
  - Maxtemp exceeded
  - Max switch number inlet
  - Max switch number outlet
  - Voltage
  - Binary input active
  - Not Adapted
  - No parameters
  - Current input is cal.
  - Drag pulses
  - Binary input open
- Bottom navigation:** Buttons for "Setpoint assignment" (Digital / simulation / pinboard or Analog / voltage- / current input), "Back", and a green circular button.
